

According to the comments returned from the midterm Report, I worked on generating my plots inline in my notebook and add the labels of axes. However, I disagree with losing one point for the midterm report only because my graphs did not have axes. This was not part of the requirements or guidelines for this.

I also incorporated the theory describing the process inside my notebook and now it contains an explanation for each big step in the code.

Finally, I'm working in the code for testing my notebook and figuring out what functions and processes have to be tested.
